

- **Use one fan for multiple bins**
- **Better utilize existing fan equipment**
- **Adaptable to most bins**

Air Delivery Ducting offers a cost-effective solution for adding aeration or drying capabilities to multiple bins. Unlike traditional aeration, which requires a separate fan for each bin, this system uses a single fan connected

to multiple bins through an innovative ducting design. Each bin connection is equipped with a damper, allowing air to be directed to or diverted from individual bins as needed. This system provides the most economical, efficient method for aerating and drying grain. It can be used with Wavcor's powerful Airblast fan or with other brands of appropriately-sized fans. An Airblast fan does not require power, so it is ideal for remote bin sites.

Single Bin Kit includes:

- 14" diameter main duct (rated to 5000CFM)
- Y-transition with damper
- 2 flexible transitions
- clamps
